

CIC biomaGUNE presents the RSEQ's González-Ciamician award to Professor Marcella Bonchio

Professor [Marcella Bonchio](#) of the University of Padua has received the international Spanish-Italian [González-Ciamician](#) award given by the RSEQ (Spanish Royal Society of Chemistry) to researchers in Italy; the award was presented by CIC biomaGUNE Ikerbasque professors Luis Liz-Marzán and Maurizio Prato (AXA Chair).

Bilateral awards come about as a result of agreements between the chemical societies of different countries to promote collaboration work among researchers from both countries and to publicize the activity of each one in a complementary way. In fact, these bilateral awards encourage the awardees to give lectures at different universities and research centers in the country where they receive the award. In this respect, Professor Bonchio delivered a lecture at CIC biomaGUNE entitled: "Supramolecular Architectures for Artificial Photosynthesis: The Quantasome Vision"

This award once again highlights the excellent relations existing in the international scientific community. In the context of these bilateral recognitions, the Italian Chemical Society (SCI) awarded the Spanish-Italian González-Ciamician prize to Professor Luis Liz- Marzán.
