

Tuesday, 9th November, 9.30am, Online

Host: Dr. Niels Reichardt

Fluorescence microscopy: techniques and applications in CIC biomaGUNE

*Dr. Irantzu Llarena
Optical Spectroscopy Platform
CIC biomaGUNE*

In this seminar will be covered the principles of fluorescence and the different techniques and applications used in CIC biomaGUNE for fluorescence imaging and its applications, from widefield microscopy to high resolution imaging with confocal microscope.

Also other techniques as FCS, FRAP, FRET, spectral imaging or multiphoton image acquisition will be introduced..
